

THERM-A-REST AIR MATTRESSES

Market-leading quality, performance and sell-through.

Exceptional performance and outstanding quality have made NeoAir™ mattresses the market leader from the moment we released them. Ounce-for-Ounce, no other air mattress can match the warmth achievable with the unique combination of our patent-pending technologies.

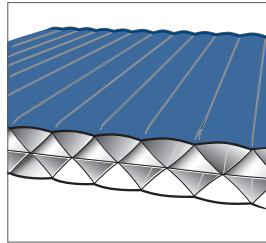

NEOAir™ v.s. the Competition

This chart shows the dramatic lead that our advanced technologies provide a NeoAir mattress, comparing our highest warmth-to-weight ratio mattress versus those from our top two competitors.

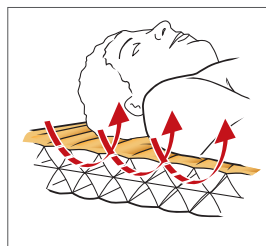

The NeoAir™ Advantage

Our patent-pending innovation uses over 100 internal baffles to maximize warmth without the added bulk, weight and long-term durability issues of synthetic or down fills. In addition, numerous horizontal baffles stabilize the mattress to ensure outstanding, all-around comfort and performance throughout the night.

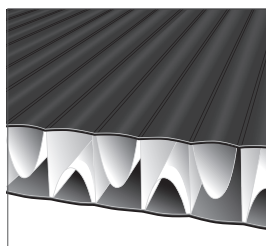

Triangular Core Matrix™ Technology

Our most advanced design uses patent-pending technology to minimize heat loss with two stacked layers of triangular baffles, creating hundreds of individual cells in our warmest mattresses. Simultaneously this internal structure adds an unmatched level of stability to every NeoAir mattress.

ThermoCapture™ Radiant Heat Technology

Used to create our warmest mattresses, up to four layers of reflective ThermoCapture™ lining are employed in patent-pending configurations to reflect radiant heat back to your body. With it, we've achieved the astounding warmth-to-weight ratios that the competition simply can't replicate.

WaveCore™ Technology

NEW

Featured in our new NeoAir Venture™ Mattress, WaveCore™ Technology slows heat loss, using a single layer of horizontal wave baffles. This basic structure doubles the warmth of an uninsulated air mattress, creating a strong, entry-level price point option for new and upgrading customers without sacrificing true, three-season performance.
